NANZ

N° 2030

The No 2030 S-shaped lever reflects the early 20th-century consideration of a functional form, while not entirely eliminating decorative elements. The broad round-ended handle, compound moldings of the shank and the boss at its axis add refined elegance to the lever. A round rose with concealed fasteners can be substituted for the demilune version shown. Recommended finishes include polished brass, polished nickel, burnished brass, pewter and antique brass as well as a broad variety of other plated and patinated finishes. This handle can be used with traditional full-mortise locksets or manufactured for use with multi-point doors.

LENGTH	4-3/8"
PROJECTION	2-3/8"
BACKPLATE	1/4" x 2-3/4"
