

N° 6022

The form of the No 6022 early American drop ring pull is essentially Baroque in the compound curves and paired cusps of the pendant ring, with a compressed sphere centered at the bottom. It is traditionally paired with surface-mounted rim locks, but also can be used as a dummy pull. Of the two available ring widths 2-1/2" and 3" the smallest size works well for cabinetry. All Nanz plated and patinated finishes are available.

Diameter: 2-1/2"
