

## N° 8240

The N° 8240 cabinet knob is a faceted version of the N° 8004. The ogee profile of the face is mirrored on the underside of the knob and features a large bullnose molding around the edge. The design achieves an architectural monumentality, transforming traditional elements into a distinctly modern design. It is often specified with the companion N° 1240 knob, which is manufactured in a variety of sizes for full-sized doors. All Nanz plated and patinated finishes are available.
